Arya Sharma

269-220-4247 | sharm215@msu.edu | in/aryasharma

Education

Michigan State University **Expected May 2027**
Bachelor of Science in Computational Data Science *GPA: 3.8/4.0*

Experience

Dell, AI Innovation Lab | Product Manager Intern May 2026 - Aug 2026

- Defined the 0-to-1 product strategy for a proactive knowledge management agent and drove development with 3 engineers over a 10-week build cycle, from product requirements through working prototype.
- Developed the agent architecture end-to-end, from the orchestration harness to the tool-calling layer, enabling the agent to autonomously plan, reason, and execute multi-step tasks
- Built a sandbox evaluation environment and agentic RAG pipeline for on-device Small Language Models, defining evaluation criteria around task completion, citation accuracy, and hallucination reduction.

Apple, Vision Products Group | Engineering Program Manager Intern May 2025 - Aug 2025

- Directly managed and delivered multi-sprint data platform programs across Vision Products Group and Video Computer Vision, coordinating execution across 6 engineers and 5+ CV/ML stakeholder teams.
- Scoped and prioritized 15+ platform features and drove onboarding of 2 new datasets, translating ML/CV team requirements into engineering priorities and execution plans.
- Introduced Agile execution processes including sprint planning, retrospectives, feature prioritization, and bug triage for 10+ high priority issues, while delivering weekly program-status reporting to leadership.

Medpace | Data Science Intern Jan 2025 - Mar 2025

- Partnered with cross-functional proposal teams to develop R Shiny dashboards and query data via Snowflake SQL/Power BI, supporting strategy for multi-million-dollar clinical trial bids.
- Applied graph theory and Louvain clustering on 100+ clinical sites to optimize site selection and strengthen proposal competitiveness.

MIDI Lab (Henry Ford Health Collaboration) | Data Science Intern Oct 2024 - Dec 2024

- Applied ML, radiomics, and AI-based deltoid segmentation to pre-operative ultrasound imaging to predict post-operative outcomes for reverse total shoulder arthroplasty patients.
- Implemented AI-based segmentation of deltoid muscle features, enhancing predictive accuracy for surgical planning.

Idaho National Laboratory | Machine Learning Intern Jul 2024 - Aug 2024

- Interviewed process engineers to identify EQP workflow pain points; defined automation opportunities and built a LLaMA model trained on 88 EQPs and 933 CAD drawings to streamline documentation.
- Implemented OCR models to extract text from CAD drawings with 85% accuracy, providing structured data that enabled downstream ML tasks and reduced manual data processing.

Projects

NIST + Johns Hopkins University | Data Science Capstone Present

- Building an end-to-end NLP and data engineering pipeline to ingest, extract, normalize, and structure resilience planning data from unstructured municipal websites and documents across the U.S.

ShelterSync | Food Donation App Apr 2025

- Conducted user research through interviews with 5 local churches and nonprofits, validating demand for a platform addressing food donation gaps that impact hundreds of weekly meals.
- Built full-stack MVP using Cursor with React (TypeScript, Vite) frontend and Node.js/Express/MongoDB backend, using Git for version control and iterative feature development, and deployed via Vercel for production use

Skills

PM, AI & Collaboration: Windsurf AI, Claude Code, Cursor, Jira, Confluence, Asana, Notion, Miro
Languages: Python, R, SQL, JavaScript, C++
ML & Development: PyTorch, scikit-learn, TensorFlow, Pandas, NumPy, React, Node.js, Flask, MongoDB, AWS, Power BI
